

OBSERVEIT INSIDER THREATS ARE EVERYWHERE.

Your biggest asset is also your biggest risk. The greatest threat to businesses today isn't the outsider trying to get in. It's the people you trust - the ones who already have the keys.

BRIDGE COMPLIANCE GAPS

Many compliance frameworks and laws require organizations to take steps to protect against insider threats. What steps are you taking to assure compliance?

Use Case

Compliance mandates are a non-negotiable for many businesses across a wide range of industries. Whether you are beholden to PCI-DSS, HIPAA, GDPR, or FERPA, you must carefully monitor and respond to insider threats to remain compliant.

Our Approach

ObserveIT monitors and audits all actions taken on an organization's systems to help meet stringent auditing requirements. ObserveIT helps companies not only protect data and reduce risk, but ensure they meet compliance requirements by offering unmatched visibility into user activity.

USER ACTIVITY MONITORING

Your people are your greatest strength, but they can also be your greatest weakness. How will you prevent critical data and assets from being compromised by your users?

Use Case

Employees are the lifeblood of your business, and they need access to critical systems and files to do their jobs. But, to remain secure and compliant, you need to make sure their actions stay within policy at all times. This requires the utmost in granular visibility.

Our Approach

ObserveIT monitors and audits all actions taken by employees on a company's systems to protect data and reduce risk. ObserveIT identifies and eliminates insider threats from employees and guarantees that your organization has clear visibility into who is doing what, when, and why.

DATA LEAKAGE PREVENTION

It's 5:00. Do you know where your data is? Data is the lifeblood of many organizations today, and loss can have massive consequences. How will you stop data loss?

Use Case

Data doesn't leave an organization on its own. Employees, privileged users, and third parties may - knowingly or unknowingly - steal it or move it to locations where it does not belong. Either way, it can spell big trouble for you.

Our Approach

ObserveIT provides organizations with "eyes on the endpoint" and the ability to continuously monitor data for signs of theft before exfiltration happens. ObserveIT alerts security and IT teams about data-related user activities that put organizations at risk.

INVESTIGATE INCIDENTS

When an insider threat incident takes place, organizations require context to respond quickly and accurately. Do you have the visibility and evidence necessary to resolve incidents?

Use Case

When an incident takes place, you need to know exactly where to get context about what happened. But system, network, and log data can be difficult to sift through. Even with a SIEM tool, it's challenging to parse data and get the context and visibility needed to investigate.

Our Approach

Quickly and thoroughly investigate insider threat incidents with complete visibility into user activity using ObserveIT. ObserveIT simplifies and streamlines insider threat investigations by offering granular details of user activity via visual capture, precise activity trails, and easy to search and understand metadata.
